Introduction

CALC BOY is a local-first PWA calculator styled after classic handheld consoles. This documentation describes the current source code for version 3.1.0.

Tip: The display is also interactive. Tap it for history; long-press it to copy the current result.

Installation

- Open the live link in Safari or Chrome.
- Use Share or the browser menu and choose Add to Home Screen.
- Launch CALC BOY from the home screen. Installed mode opens the app fullscreen.

Offline Mode

The service worker caches the app shell, index.html and icons under calcboy-v3.1.0. Registration runs only on HTTPS. After the first online launch, the app can start from cache.

First calculation

Example: $12 + 30 =$ shows 42 and adds the expression to history.

History, copy and share

The last ten successful calculations are saved. The history view also shows sum and average. Text and PNG export are available when the browser supports sharing or clipboard APIs.

Calculator pages

Page	What this page does
BASIC	Standard calculator for everyday arithmetic, signs, square roots and smart percent calculations.
EXT	Scientific and memory page with trigonometry, logarithms, powers, roots, factorial, pi and e.
CONV	One-tap converters for distance, temperature, mass, volume, speed, time and German VAT.
FIN	Finance helpers for compound interest with monthly savings, interest amount, tips, bill splitting and manual currency conversion.
PRG	Programmer functions, integer base display, bitwise operators, random number and RPN mode.
PLOT	Draws 20 built-in function graphs as pixel plots on the LCD.
FORM	Formula assistant based on three stored variables A, B and C.

Themes

Game Boy, GB Color, NES, Super NES, Switch, Famicom, Virtual Boy (unlockable)

Games

GAME opens the menu. Press 1, 2 or 3 for Math Attack levels, or 5 for Snake.

Keyboard

Key	Action
0-9	digits
, or .	decimal separator
+ - * /	basic operators
Enter or =	equals
Escape	AC
%	percent
r or w	square root
arrow keys	Snake direction and secret-code input

Storage and Privacy

All data remains in browser localStorage. There is no analytics code, no external font request and no live exchange-rate API.

theme, sound, angle mode, history, memory, finance parameters, exchange rate, persons, RPN mode, RPN stack, formula variables, game high scores, Virtual Boy unlock.

Limitations

Service worker registration only runs on HTTPS. The inline manifest has icons only when opened via HTTP or HTTPS. Currency conversion uses a manually stored rate and no live-rate API. Programmer base conversion displays the converted value in the status line; it does not replace the main display. Browser sharing, clipboard, vibration and battery display depend on browser support. The UI language inside the app is German.

Troubleshooting

If an old version appears after update, close and reopen the app twice. If sound does not play, tap once inside the app and check SND ON. If sharing is unavailable, use clipboard copy or browser download fallback. To reset all data, delete website data for this domain.
